EXPERIENCE

SPRINGBROOK SOFTWARE — *April 2025 – Present*

Full Stack .NET & Angular Developer

Software company serving local governments and utilities, based in North Carolina, United States.

- Developed Publiq software, designed specifically for local governments and utility companies.
- Implemented microservice architecture to improve system scalability and performance.
- Designed and managed SQL Server databases, using T-SQL for data handling.
- Collaborated on full stack development, integrating the product's frontend and backend.

Stack: Angular, .NET, SQL Server, T-SQL, Entity Framework, Microservice Architecture, Azure DevOps, Git.

WEBCREEK — *September 2023 – March 2025*

Full Stack .NET & Angular Developer

Software development company delivering projects for clients in Houston, Texas, United States.

- Developed the web application for NorthStar Memorial Group using Angular and .NET.
- Managed SQL Server databases for storing and querying system data.
- Implemented serverless solutions using Azure Functions.
- Set up CI/CD pipelines with Azure DevOps and version control with Git, streamlining project delivery and collaboration.

Stack: Angular, .NET, SQL Server, Entity Framework, Azure Functions, Azure DevOps, Git

ALABAMA SOLUTIONS — *February 2022 – August 2023*

Full Stack .NET & Angular Developer

Project for Infocorp, developing digital banking platforms in Uruguay.

- Developed the LAFISE and Republic Bank banking platforms for client Infocorp.
- Implemented innovative solutions to enhance the user experience across the platforms.
- Optimized processes and workflows to streamline banking operations.
- Collaborated with cross-functional teams to ensure seamless integration and full functionality of the platforms.

Stack: Angular, ASP.NET, SQL Server

VERSOFT — *February 2021 – February 2022*

Full Stack Developer

Software development company based in Santo Domingo, Dominican Republic.

- Developed REST APIs to support various applications and services.
- Built web pages using Angular and .NET Core.
- Designed and managed SQL Server databases.
- Participated in the full development cycle of assigned projects.

Stack: Angular, .NET Core, SQL Server, Entity Framework.

VE CORE SYSTEMS — *November 2019 – March 2021*

Software Developer

Software development company based in Caracas, Venezuela.

- Developed and maintained REST APIs using .NET Core MVC.
- Managed databases using T-SQL.
- Implemented microservice architecture to improve system scalability.
- Collaborated with cross-functional teams to ensure seamless integration and proper functioning of software components.

Stack: .NET Core MVC, SQL Server, T-SQL, Microservice Architecture

ARMANDOINFO — *July 2018 – November 2019*

Junior .NET Developer

Venezuelan digital news outlet, for which internal and external technology solutions were developed.

- Developed the Armando.Info website using .NET Core MVC.
- Built a mobile application using Xamarin Forms.
- Built the company's internal system using Windows Forms.
- Participated in various stages of the software development lifecycle, from design to implementation.

Stack: .NET Core MVC, Xamarin Forms, Windows Forms

PERSONAL PROJECTS / SAAS

MERKI — *Personal Project — github.com/edorguez/merki*

Full Stack Developer

Cross-platform supermarket cart calculator for Venezuela, featuring dual-currency (USD/Bolívares) budgeting and on-device receipt OCR.

- Built a cross-platform mobile app (iOS & Android) with Expo/React Native and a companion React web client for calculating supermarket cart totals in real time.
- Developed a Go/Gin REST API backend with PostgreSQL and GORM, including a scheduled scraper for official BCV exchange rates.
- Implemented dual-currency budget tracking, on-device receipt OCR (ML Kit), and secure authentication (email/password, Google OAuth, guest access).
- Containerized and deployed the system on AWS using Docker, with a CI/CD pipeline via GitHub Actions.

Stack: React Native (Expo), React, Zustand, Golang, PostgreSQL, SQLite, Redis, AWS

BUSINESS MANAGER — *Personal Project — github.com/edorguez/business-manager*

Full Stack Developer

Microservices-based business management platform built to explore gRPC communication and polyglot data persistence across services.

- Architected a microservices backend in Golang, using gRPC (with Protocol Buffers) for inter-service communication.
- Built the frontend with Next.js and TailwindCSS for a responsive, component-driven UI.
- Designed a polyglot persistence layer, combining PostgreSQL, MongoDB, and Redis according to each service's data and caching needs.
- Set up the local development and infrastructure tooling to run and orchestrate all services together.

Stack: Next.js, Zustand, TailwindCSS, Microservices, gRPC, PostgreSQL, Golang, MongoDB, Redis
